Bridge Customer References

"This is just a little thank you to Lessard Welding for a great product; "Your Portable Bridges." They have been an unbelievable asset to our company. We now have 5 bridges from Lessard Welding. Knowing that these bridges are engineer approved for our type of work really helps us address safety and environmental issues. "

*Tom Clouthier
Hec Clouthier & Sons Inc.*

"I am writing this letter to express my satisfaction regarding the quality of the Lessard bridges that we purchased from your company. In the last 4 years, we had to replace our old bridges with new ones. We needed bridges that satisfied the MNR and MTO requirements, at a competitive price. We were looking for a company with a well-established reputation for making a high quality product. This is why we chose Lessard Welding. We purchased several bridges varying in size from 20, to 30, 40 and 50 feet. The bridges were delivered in time and have given us complete satisfaction. They are easy to install and very strong. We find that the yearly inspections from our field peoples are also simpler. I want to note also that all the documentation necessary to satisfy the MNR requirements was supplied with the bridges in a very professional manner. Lessard Welding has proven to be a quality supplier for us and I am looking forward for a continued successful business relationship with your company in the future.

*Benoit Nadeau
Woods Operation Supervisor
Domtar, Elk Lake*

"In the twenty years I have done business with Lessard Welding I have experienced nothing but exceptional service. The professionalism and service offered has been a delight to be associated with. This combined with competitive pricing has helped me complete dozens of engineering projects over the years on time and on budget. Lessard Welding offers a wide variety of services and has the unique ability to offer viable solutions when difficult problems present themselves. I would recommend them highly in all regards."

*Gary MacKay, P.Eng.
Forest Engineer
Domtar Inc.
Espanola, Ontario*

"Our woodlands operation utilized two portable steel bridges to span streams with moderately steep slopes during the winter months. The bridges were very easy to install with a 235 shovel. A high volume of log haul traffic passed over the bridges and never once was there any difficulties with them such as shifting or displacement of the bridge segments. Once the haul was complete in January, the bridges were removed with ease and no impact was caused to the stream or its slopes. The portable bridges gave us the freedom to remove the crossings while access was still available. Traditional crossings such as ice bridges would have remained in place until spring breakup requiring repeated visits to the site as well as reestablishing access. I consider them a great investment".

*Dan Drennan, R.P.F.
Planning Forester
Norbord - Cochrane Division*

"...I would like to thank you for your courteous and prompt service with our purchase of the four portable steel bridges that we here at Weyerhaeuser Nipigon Plywood acquired. These bridges are perfect for the type of operations we deal with,

stream crossings etc.. Also these bridges are Ministry of Natural Resources approved here in the Nipigon District. Our contractors, who are using these portable bridges and our company would recommend them as well as ourselves because they are built strong, built to last and can be transported very easily to other locations. To sum up, I would recommend these portable steel bridges to anyone for any type of operation."
